Task

Configure development environment
Establish project structure
Configure documentation generation
Define shared configuration
Establish logging and common utilities
Define component interfaces
Establish component communication
Define shared data models and error contracts
Implement Repository Tools
Implement Workflow Engine
Implement repository content retrieval
Implement documentation discovery
Assemble repository context
Support knowledge retrieval
Implement Reasoning Service
Integrate AI provider interfaces
Generate proposed documentation updates
Produce documentation impact explanations
Implement validation services
Integrate end-to-end workflow
Execute testing and verification
