Task

Configure development environment
Establish project structure
Configure documentation generation
Define shared configuration
Establish logging and common utilities
Implement Repository Tools
Implement Workflow Engine
Implement Context Builder
Implement shared communication contracts
Implement platform orchestration
Execute repository discovery
Build validated context package
Invoke Documentation AI Agent
Validate proposed documentation artifact
Produce reviewable documentation proposal
Implement Reasoning Service
Integrate AI provider interfaces
Generate proposed documentation updates
Produce documentation impact explanations
Implement validation services
Validate documentation consistency
Validate links and referenced files
Validate MkDocs build
Generate validation reports
Integrate component interactions
Implement documentation review workflow
Apply approved documentation changes
Generate Git diffs
Produce completion summaries
Perform component testing
Perform integration testing
Validate end-to-end workflows
Verify documentation quality
Verify user approval workflows
